Name	Student number	Email
Alejandro Gueren Gonzalez	2727241	a.guerenagonzalez@student.vu.nl
Jakub Dryja	2732653	j.o.dryja@student.vu.nl
Daniele Roggi	2735539	d.roggi@student.vu.nl
Salvatore Pernice	2722134	s.pernice@student.vu.nl

Overview

Our project features a customized version of a Tamagotchi game. The user is able to choose from several animals. The core characteristics of the game involves being able to play, feed, clean and set the pet to sleep. Doing these actions increase their respected vitals. Vitals of energy, mood, hunger and cleanliness deplete over time. The pet dies when two vitals are empty.

- Customizations/extensions: Memory game, guess the number game, animals and snacks.
- Stakeholders: Children, future pet owners, teenagers.

Functional features

ID	Short name	Description	Champion
F1	Create a new creature	Player is able to customize name, colour and type of animal.	Jakub
F2	Keep track of vitals	The vital levels are displayed and updated. They automatically decrease with time. - Energy - Mood - Hunger - Cleanliness	Alejandro
F3	Sleep	The player can put the animal to sleep, improving his energy on the vitals.	Salvatore
F4	Play	The player is able to select a mini game which improves the mood on the vitals but decreases the energy vital.	Daniele
F5	Feed	The player can select a snack and feed the animal, improving his hunger on the vitals relatively to the snack chosen.	Alejandro
F6	Clean pet	The player repeatedly clicks on the pet which improves his cleanliness.	Daniele
F7	Creature dies upon low vitals	The creatures dies when two vitals are depleted. Player is able to play again.	Salvatore

Functional features

ID	Short name	Description	Champion
F7	Memory Game (minigame)	The user has to guess and remember a sequence of numbers or icons and repeat them in order.	Jakub
F8	Guess the number (minigame)	The player enters a number, the game displays higher/lower or win.	Jakub

Quality requirements

ID	Short name	Quality attribute	Description
QR1	Vitals work properly	Reliability	The games and tasks correctly affects the vitals, the pet death is coherent and functional.
QR2	Consistent vitals display	Consistency	The vitals uniformly decrease with time without interruptions or unexpected behaviours.
QR3	Simple interactions with pets	Usability	The games are straightforward and tasks are simple to perform.
QR4	Responsive tasks and games	Performance	The tasks correctly change the vitals and the games work rapidly.
QR5	Simple fixes and updates	Maintainability	The game functionalities should be intuitive to extend and potential bugs should be easy to detect.

Time log

Team number	8		
Member	Activity	Week number	Hours
Salvo	Do some research on the original Tamagotchi game	1	2
Alex	Think of possible mini games to implement	1	2
Jakub	Make a mockup to show a general idea	1	2
Daniele	Describe main type of users - stakeholders	1	2
Salvo	Define functional features	1	1
Alex	Define functional features	1	1
